

Clinical Exchange ePrescribe

# Save time and help improve patient safety

The benefits of electronically writing, submitting and routing prescriptions touch everyone in health care including physicians, patients, physician networks, payers and pharmacies.

Clinical Exchange ePrescribe, provided by Careexpand, is a standalone application that connects physicians to pharmacies, helping to save time and improve patient safety by securely generating and routing electronic prescriptions. The option of electronic prescribing of controlled substances (EPCS) is also available.

# Helps eliminate the need for handwriting interpretation and minimize medication errors

## Reduce callbacks

Physicians who submit prescriptions electronically in a standard format, reduce the need to interpret handwriting and minimize costly medication errors. ePrescribing and electronic renewal management lead to fewer phone calls between pharmacies and physicians regarding handwriting interpretation, non-covered drugs and prior authorization requirements. Pharmacy and physician practice personnel also spend less time entering data when they can transmit new prescriptions and refill requests electronically.

## Drive patient safety and compliance

Electronic prescribing helps reduce adverse drug events (ADEs) with automated drug interaction checking. It also improves formulary compliance with automated eligibility confirmation and formulary alternatives. Educational materials and co-pay assistance are also made available for the provider to share with the patient to help in their medication compliance.

## Improve patient satisfaction

For patients, electronic prescribing results in a more efficient process that includes fewer lost prescriptions and trips to the pharmacy, and less time waiting for replies from physicians for refills. We also deliver real-time, prescription-appropriate coupons and patient education materials to your patients.

**Simple, secure prescribing that helps reduce callbacks, enhance patient safety and office efficiency, and improve patient satisfaction**

## Features

- Support for compound medications
- Integrated drug-drug, drug-allergy and duplicate therapy screening
- Automatic display of formulary alternatives
- Three-click prescribing with robust script preference management for your staff
- One-click renewals
- Ability to connect to virtually all pharmacies nationwide
- Real-time patient education and coupons
- Support for EPCSs
